THE AIR FORCE,
AND THE NAVY

WASHINGTON, DC 15 November 1983

DEWATERING AND GROUNDWATER CONTROL

CHAPTER		Paragraph	Page
1.	INTRODUCTION		
	Purpose and scope	1-1	1-1
	General	1-2	1-1
	Construction dewatering	1-3	1-1
	Permanent groundwater control	1-4	1-2
2.	METHODS FOR DEWATERING, PRESSURE RELIEF, AND SEEPAGE CUTOFF		
	General	2-1	2-1
	Types and source of seepage	2-2	2-1
	Sumps and ditches	2-3	2-1
	Wellpoint systems	2-4	2-2
	Deep-well systems	2-5	2-4
	Vertical sand drains	2-6	2-5
	Electro-osmosis	2-7	2-5
	Cutoffs	2-8	2-5
	Summary of groundwater control methods	2-9	2-8
	Selection of dewatering system	2-10	2-8
3.	GEOLOGIC, SOIL, AND GROUNDWATER INVESTI- GATIONS		
	General	3-1	3-1
	Geologic and soil conditions	3-2	3-1
	Groundwater characteristics	3-3	3-4
	Permeability of pervious strata	3-4	3-4
	Power	3-5	3-8
	Surface water	3-6	3-8
4.	DESIGN OF DEWATERING, PRESSURE RELIEF, AND GROUNDWATER CONTROL SYSTEMS		
	Analysis of groundwater flow	4-1	4-1
	Mathematical and model analyses	4-2	4-1
	Flow-net analyses	4-3	4-29
	Electrical analogy seepage models	4-4	4-29
	Numerical analyses	4-5	4-34
	Wellpoints, wells, and filters	4-6	4-34
	Pumps, headers, and discharge pipes	4-7	4-36
	Factors of safety	4-8	4-40
	Dewatering open excavations	4-9	4-42
	Dewatering shafts and tunnels	4-10	4-47
	Permanent pressure relief systems	4-11	4-48
	Freezing	4-12	4-48
	Control of surface water	4-13	4-49
5.	INSTALLATION OF DEWATERING AND GROUND- WATER CONTROL SYSTEMS		
	General	5-1	5-1
	Deep-well systems	5-2	5-1
	Wellpoint systems	5-3	5-2
	Vertical sand drains	5-4	5-5
	Cutoffs	5-5	5-5
	Piezometers	5-6	5-6
6.	OPERATION AND PERFORMANCE CONTROL		
	General	6-1	6-1
	Operation	6-2	6-1
	Control and evaluation of performance	6-3	6-2
7.	CONTRACT SPECIFICATIONS		
	General	7-1	7-1

*This manual supersedes TM 5-818-5/AFM 88-5, Chap 6/NAVFAC P-418, April 1971.

	<i>Paragraph</i>	<i>Page</i>
Types of specifications	7-2	7-1
Data to be included in specifications	7-3	7-2
Dewatering requirements and specifications	7-4	7-2
Measurement and payment	7-5	7-3
Examples of dewatering specifications	7-6	7-3
■ APPENDIX A. REFERENCES AND BIBLIOGRAPHY		A-1
B. NOTATIONS		B-1
C. FIELD PUMPING TESTS		C-1
D. EXAMPLES OF DESIGN OF DEWATERING AND PRES- SURE RELIEF SYSTEMS		D-1
E. TRANSFORMATION OF ANISOTROPIC SOIL CONDITIONS TO ISOTROPIC SOIL CONDITIONS		E-1
F. WELL AND TOTAL DISCHARGE MEASUREMENTS		F-1
G. EXAMPLES OF DETAILED DEWATERING SPECIFICA- TIONS		G-1

LIST OF FIGURES

<i>Figure</i>		<i>Page</i>
1-1	Installation of piezometers for determining water table and arte- sian hydrostatic pressure	1-2
1-2	Permanent groundwater control system	1-3
2-1	Dewatering open excavation by ditch and sump	2-2
2-2	Self-jetting wellpoint	2-3
2-3	Use of wellpoints where submergence is small	2-4
2-4	Drainage of an open deep cut by means of a multistage wellpoint system	2-4
2-5	Vacuum wellpoint system	2-5
2-6	Jet-eductor wellpoint system for dewatering a shaft	2-6
2-7	Deep-well system for dewatering an excavation in sand	2-7
2-8	Deep wells with auxiliary vacuum system for dewatering a shaft in stratified materials	2-8
2-9	Sand drains for dewatering a slope	2-9
2-10	Electro-osmotic wellpoint system for stabilizing an excavation slope	2-9
2-11	Grout curtain or cutoff trench around an excavation	2-10
2-12	Dewatering systems applicable to different soils	2-13
2-13	Recharge of groundwater to prevent settlement of a building as a result of dewatering operations	2-14
3-1	Geologic profile developed from geophysical explorations	3-2
3-2	Permeameters: (a) constant head and (b) falling head	3-3
3-3	Specific yield of water-bearing sands versus D_{10} , South Coastal Basin, California	3-4
3-4	D_{10} versus in situ coefficient of permeability—Mississippi River Valley and Arkansas River Valley	3-6
3-5	Formulas for determining permeability from field falling head tests	3-7
3-6	Inches of rainfall during 10- and 30-minute and 1-hour periods ...	3-8
4-1	Flow and head for fully penetrating line slot; single-line source; artesian, gravity, and combined flows	4-2
4-2	Height of free discharge surface h_s ; gravity flow	4-3
4-3	Flow and head for partially penetrating line slot; single-line source; artesian, gravity, and combined flows	4-4
4-4	Flow and head for fully and partially penetrating line slot; two- line source; artesian and gravity flows	4-5
4-5	Flow and head (midway) for two partially penetrating slots; two- line source; artesian and gravity flows	4-6
4-6	Flow and head for fully and partially penetrating circular slots; circular source; artesian flow	4-7
4-7	Head at center of fully and partially penetrating circular slots; cir- cular source; artesian flow	4-8
4-8	Flow and drawdown at slot for fully and partially penetrating rec- tangular slots; circular source; artesian flow	4-9
4-9	Head within a partially penetrating rectangular slot; circular source; artesian flow	4-10
4-10	Flow and drawdown for fully and partially penetrating single wells; circular source; artesian flow	4-11

<i>Figure</i>		<i>Page</i>
4-11	Flow and drawdown for fully and partially penetrating single wells; circular source; gravity flow	4-12
4-12	Flow and drawdown for fully penetrating single well; circular source; combined artesian and gravity flows	4-13
